# Overview

## Illumination

### 1. Illumination

This section describes the model and the query interface for lights.

#### Model

#### Attributes

Model	Attribute	Description	Domain
Light			
	powerState	Defines the state of the light	On, Off, Unknown
	intensityLevel	Defines the intensity level of the light	0-100%
	operatedBy	Operations organization	
	geoCoordinates	Location of the light	{lat, lon}

#### Actions

Model	Action	Description	Domain
-------	--------	-------------	--------

Light			
	set		
	powerState	Sets the state of the light	On, Off, Unknown
	intensityLevel	Sets the intensity level of the light	0-100%
	schedule	Sets the schedule for light	
	policy	Defines the policy for the lights	

## Request

Method	URL
POST	http://mqciscocls.mqidentity.net:8080/fid-SmartLightGateway

Type	Params	Values
POST	Query	json

## Response

Status	Response
200	json
403	
400	
401	
500	{"error": "Something went wrong. Please try again later."}

## Examples - Find

Attribute	Request
geocoordinates	<pre>{   "query": {     "documentation": "Get all lights operated by specified organization within the specified viewport. Lat is specified in the format minLat,maxLat and Lon is specified as minLong, maxLong",     "find": {       "light": {         "operatedBy": "sensity-qa",         "geocoordinates": {           "lat": "+37.232976,+37.442615",</pre>

```
    "lon": "-122.174149,-121.771088"
  }
}
}
```

## Response

```

	<b>Response</b>
	<pre>{   "Include": "OK" }</pre>

Parking

## 2. Parking

This section describes the model and the query interface for parking.

### Model

### Attributes

Model	Attribute	Description	Domain
ParkingSpace			
	Id	Defines the identifier of the parking space	Alphanumeric string
	type	Defines the type of the parking space	{Self, ParknRide, Valet, Airport, MeetnGreet, ParknFly, Demarcated, Unmarked}
	operatedBy	Operations organization	
	geoCoordinates	Location of the parking space	{lat, lon}
	State	Current tally for the parking space	{vacant, occupied, reserved, total, available }
ParkingSpot			
	State	Current state of the parking spot	{occupied, reserved}

### Actions

Model	Action	Description	Domain

### Request

Method	URL
POST	http://mqciscocls.mqidentity.net:8080/fid-ParkingGateway

# Kiosk

## 3. Kiosks

This section describes the model and the query interface for kiosks.

### Model

## Attributes

Model	Attribute	Description	Domain
Kiosk			
	Id	Defines the identifier of the kiosk	Alphanumeric string

	name	Defines the name of the kiosk	
	operatedBy	Operations organization	
	geoCoordinates	Location of the parking space	{lat, lon}
ContentInfo			
	id	Defines the identifier of the content	Alphanumeric string
	name	Defines the name of the content	
	description	Description of the content	
	type	Type of the content	
	url	url for the content	

## Actions

Model	Action	Description	Domain
Kiosk			
	Set currentContentinfo	Sets the current content to be displayed on the kiosk	
	Set currentAlert	Sets the current notification/alert to be displayed on the kiosk	

## Request

Method	URL
POST	http://mqciscocls.mqidentity.net:8080/fid-ParkingGateway

Type	Params	Values
POST	Query	json

## Response

Status	Response
200	json
403	
400	
401	
500	{"error": "Something went wrong. Please try again later."}

## Examples - Find

Attribute	Request
null	<pre>{   "query": {     "documentation": "Get all kiosks",     "find": {       "kiosk": {}     }   } }</pre>
	Response
	<pre>{   "kiosk": [     {       "id": 1,       "geocoordinates": {         "latitude": 41.87938,         "longitude": -87.624551       }     }   ] }</pre>

Attribute	Request
geocoordinates	<pre>{   "query": {     "documentation": "Get kiosks near specified geocoordinates",     "find": {       "var": {         "name": "queryPoint", </pre>

	<pre> "geocoordinates": {   "latitude": 37.38545,   "longitude": -121.98857 }, "kiosk": {   "le": {     "target": "distance(this, queryPoint)",     "value": "5ft"   } } } } </pre>
	<b>Response</b>
	<pre> {   "kiosk": [     {       "id": 1,       "geocoordinates": {         "latitude": 41.87938,         "longitude": -87.624551       }     }   ] } </pre>

## Examples - Process

Action	Request
set ContentInfo	<pre> {   "query": {     "documentation": "Set content for specified kiosk",     "find": {       "kiosk": {         "id": ["1"]       }     },   },   "process": {     "set": {       "currentContentsInfo": [         {           "id": "someContentId"         }       ]     }   } } </pre>

	}
	<b>Response</b>
	<pre>{   "status": [     "Success"   ] }</pre>

Action	Request
set currentAlert	<pre>{   "query": {     "documentation": "Set notification for specified kiosks",     "find": {       "kiosk": {         "id": ["1", "2"]       }     },     "process": {       "set": {         "currentAlert": "some notification"       }     }   } }</pre>
	<b>Response</b>
	<pre>{   "status": [     "Success",     "Success"   ] }</pre>

Action	Request
set currentAlert	<pre>{   "query": {     "documentation": "Cancel the notification for specified kiosks",     "find": {       "kiosk": {         "id": ["1", "2"]       }     },     "process": {       "set": {         "currentAlert": null       }     }   } }</pre>

	<pre>     }   } } } </pre>
	<b>Response</b>
	<pre> {   "status": [     "Success",     "Success"   ] } </pre>

# Glossary

## Conventions

- **Client** - Client application.
- **Status** - HTTP status code of response.
- All the possible responses are listed under 'Responses' for each method. Only one of them is issued per request server.
- All response are in JSON format.
- All request parameters are mandatory unless explicitly marked as `[optional]`
- The type of values accepted for a *request* parameter are shown in the values column like this `[10|<any number>]`. The `|` symbol means *OR*. If the parameter is `[optional]`, the default value is shown in blue bold text, as **10** is written in `[10|<any number>]`.

## Status Codes

All status codes are standard HTTP status codes. The below ones are used in this API.

**2XX** - Success of some kind

**4XX** - Error occurred in client's part

**5XX** - Error occurred in server's part

Status Code	Description
200	OK
201	Created
202	Accepted (Request accepted, and queued for execution)
400	Bad request
401	Authentication failure
403	Forbidden
404	Resource not found
405	Method Not Allowed

409	Conflict
412	Precondition Failed
413	Request Entity Too Large
500	Internal Server Error
501	Not Implemented
503	Service Unavailable
